PROFESSIONAL SUMMARY

Java Full Stack Developer with nearly 4 years of software development experience across enterprise backend engineering and full-stack application development. Hands-on experience with Java, Spring Boot, Spring MVC, Spring Data JPA, Hibernate, REST APIs, microservices and Angular with TypeScript. Worked across 5+ microservices at NiCE and developed or modified 15+ REST APIs at Xcaliber. Experienced in AWS-based event-driven processing, external system integrations, application troubleshooting and FIPS-readiness investigations. Familiar with JUnit, Git, Maven, Gradle and Jenkins, with experience collaborating across engineering, QA and DevOps teams.

TECHNICAL SKILLS

Programming: Java 8, Java 17, JavaScript, TypeScript, HTML5, CSS3
Core Java: Object-Oriented Programming (OOP), Collections Framework, Streams, Exception Handling
Backend Engineering: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, RESTful APIs, Microservices, API integration
Frontend Engineering: Angular, Ionic, Bootstrap, responsive UI development, frontend–backend integration
Databases: PostgreSQL, MySQL, SQL, CRUD operations, joins
Cloud & Integration: AWS Lambda, Amazon SQS, DynamoDB, Amazon S3, Amazon CloudWatch, AWS CDK, Micrometer, event-driven processing
Testing & Delivery: JUnit, debugging, defect resolution, code reviews, Git, Bitbucket, Maven, Gradle, Jenkins, Agile/Scrum
Security Exposure: JWT/JWKS validation, FIPS-readiness investigations, AWS-managed encryption

WORK EXPERIENCE

NiCE | Software Developer | *September 2025 – November 2026*

- Developed and enhanced backend capabilities across 4–6 microservices in a workforce-management platform, working on API integrations, distributed processing and service-level troubleshooting.
- Onboarded Cisco UCCE integration by implementing 3–5 integration components/APIs, and worked on Amazon Connect and Avaya integrations to normalize and process contact-centre data for downstream workforce-management workflows.
- Implemented and maintained event-driven processing workflows using AWS Lambda, Amazon SQS, DynamoDB and Amazon S3 across backend integration components.
- Designed application-level metrics using Micrometer and integrated them with Amazon CloudWatch, enabling visibility into ingestion event counts and processing duration for operational monitoring.
- Independently investigated FIPS-readiness issues involving cryptographic compatibility, JWT/JWKS token validation and AWS-managed encryption configurations; identified technical gaps, documented findings and implemented fixes within the assigned scope.
- Diagnosed and resolved application defects, wrote unit tests using JUnit, and participated in code reviews and collaboration with engineering, QA and DevOps teams.

Xcaliber Infotech | Software Developer | *November 2022 – September 2025*

- Owned end-to-end development of the Courses and Events feature in Cooee, a full-stack web application, delivering functionality as part of a three-member development team.
- Developed and enhanced full-stack application functionality using Java, Spring Boot, Angular, TypeScript and PostgreSQL, developing or modifying 11–20 REST APIs to integrate frontend workflows with backend services.
- Developed backend functionality using Spring MVC, Spring Data JPA and Hibernate, implementing persistence logic and database interactions for application features.
- Implemented SQL operations, including CRUD queries and joins, to support application workflows and data retrieval.
- Wrote unit tests using JUnit, participated in code reviews, resolved application defects and supported builds and deployments using Git, Bitbucket, Maven, Gradle and Jenkins.

PROJECTS

WFMHub | NiCE

Enterprise workforce-management integration platform involving microservices, contact-centre data integrations and event-driven backend processing. Focus areas included Cisco UCCE onboarding, Amazon Connect and Avaya integrations, AWS-based processing, observability and FIPS-readiness engineering.

Cooee | Xcaliber Infotech

Full-stack web application developed using Angular, TypeScript, Java, Spring Boot and PostgreSQL. Owned the Courses and Events feature end to end within a three-member development team.

EDUCATION

M.Sc. Computer Application | MIT Arts, Commerce & Science College, Pune | 2022–2024 | CGPA: 9.15
B.Sc. Computer Science | Nowrosjee Wadia College, Pune | 2019–2022 | CGPA: 9.53
